

MegaLine®@home

at a glance

Infrastructure for smarthomes & smartoffices at a glance

Communication

Fast surfing and telephoning are merging more and more. With the MegaLine®@home data network, we are ready and waiting for the expansion of the network, for we are already in a position to transfer up to 10 Gbit/s.

Entertainment

Watching television, gaming, surfing, listening to music, viewing photographs or streaming – all services are available all over the house at all times. The neutral network structure even allows these applications to be changed around. MegaLine®@home interconnects all devices and turns the television into a slide projector or hi-fi system.

Home technology

Have you forgotten to turn off the light? Is the cooker still on? No problem! All devices can be controlled conveniently when you're away from home.

Security

No matter whether you're using external surveillance, presence detectors or alarm systems: MegaLine®@home makes the connection, keeping you informed of the situation at home at all times.
